DRAGON II

In conjunction with

GREAT LAKES OF THE WORLD V (GLOW)

April 26-30, 2008
Addis Ababa, Ethiopia

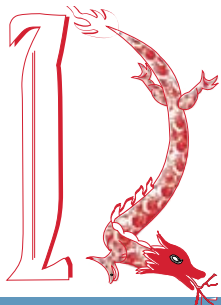

The Delta Research and Global Observation Network (DRAGON) is pleased to partner with the Aquatic Ecosystem Health and Management Society (AEHMS) and its Great Lakes of the World (GLOW) conferences to sponsor a program devoted to understanding ecological, hydrological, geological, and hydrogeochemical processes and management of deltaic coastal ecosystems.

DRAGON II aims to build a persistent community of practice focused on sharing information that ultimately promotes sound ecological forecasting for the sustainability of the world's deltaic ecosystems.

GLOW is a continuing series of international symposia organized by AEHMS to establish a platform where understanding of structure, function and performance of healthy and damaged ecosystems from integrated, multidisciplinary and sustainable perspectives is promoted.
